

RESEARCH

about deafblindness!

DURING THE LAST YEARS, there has been a huge increase in international research concerning deafblindness, and it is of great importance to make these results accessible.

At our website you can find a database with over 3.500 scientific articles concerning deafblindness, stretching from any time in the past up until March 2017. The articles have been collected through systematic searches in scientific databases and categorized in close cooperation with The Audiological Research Centre in Örebro.

The material is updated once a year and can be accessed both in Swedish and English. If you have any comments on this research overview, please contact us by using the comment field.

**National Resource Center
for Deafblindness**

National Resource Center for Deafblindness

acts under the National Swedish Board of Health and Welfare. The primary task of the center is to offer different kinds of **expert support** about deafblindness and to develop and spread **information** about deafblindness in different forms and contexts. Another aim is to develop **long-term strategies** in order to create sustainable support for people with deafblindness in Sweden.
